## New and improved functions

Blu2Light is evolving quickly and many of your wishes can already be fulfilled. Read on for a short overview of the latest system upgrades:

- Saving the system configuration / data export
  - Your B2L configuration can be transferred to and thus saved on another iPad or hard disk
  - Configurations can be collated on a central iPad, e.g. following parallel commissioning of individual storeys of a building
  - Configurations can be emailed to VS for analysis and support purposes
- Copying and pasting configurations between nodal points
  - Ensures uniform parameters in the functional groups
  - Considerably speeds up commissioning in larger rooms
- Central motion detection
  - Automatic setup of central control of several functional groups with several sensors (e.g. all sensors in a room control all groups)
- "Deleted Systems" folder
  - Deleted systems are saved in a cache area and can be restored if required
- Improved net stability and net login.

## Update your app and stay ahead of the curve.

### cube berlin – Blu2Light in everyday use

An innovative building is currently taking shape directly in front of Berlin's main station. The newbuild succeeds in blending intelligent building technology with a flexible space concept – of which Blu2Light forms an integral part.

*Matthias Schmidt, Development Executive at CA Immo Deutschland GmbH: "The main criterion for choosing Blu2Light was the high degree of flexibility the solution provides. As a result, we can address the wireless light control system both using a classic switch and the app. Moreover, Blu2Light can be used with or without sensors, with a beacon function and can be integrated into the cube Berlin's digital concept. This flexibility is of great importance especially with regard to the different requirements of individual tenants."*
