

W2 OPTICS SYSTEM 1 ROW

Excellent light quality by new optic functions

The W2 optics benefit from CLC, ELA and UGR. Technically and mechanically compatible optics, LED boards and drivers result in a high performance lighting system.

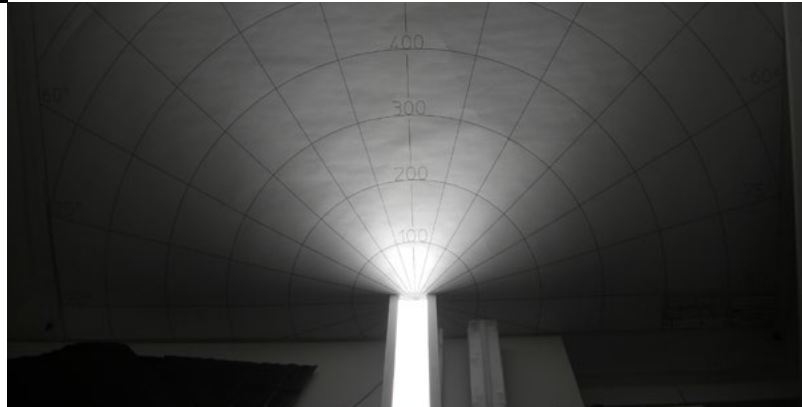

Extended Luminous Area (ELA)

reduces the glare when you look directly into the optic as the transition area from bright to dark is much wider than at normal TIR or bulb lenses.

Constant Light Colour (CLC) is the colour uniformity of the emitted light from the LED mid power chip. A very low colour temperature differences between the outer and inner light beam areas is achieved by mixing the different light temperatures of the mid power LEDs.

UGR is the **unified glare rating**. The lower this value, the less the user is glared by the light.

Adjustable system combination

Optics, LED boards and LED drivers
Find you perfect match!
