

ECO SYSTEM CONNECT ZERO PLUS

» SMALL THINGS CAN BE GREAT

Your product + ZERO PLUS + LiNA App = Your Bluetooth device

Our Bluetooth® module for integration into the Blu2Light ECO system based on Mesh Technology

How does the Connect ZERO PLUS module work?

The Blu2Light Connect ZERO PLUS and ZERO PLUS DC are modules for installation in operating devices which are to be controlled by Bluetooth®. The modules consist of the radio module with Bluetooth® technology, the power supply and an antenna. This means that the integration of the radio module is simple and pre-certified.

The Blu2Light Connect ZERO PLUS is part of the Blu2Light ECO system. Many system functions such as timers, scenes and sequences are immediately available. The mesh software and the evaluation are already pre-installed on the Blu2Light Connect ZERO PLUS.
